LS SERIES MECHANICAL LEVEL SWITCHES

K-TEK's LS Series Mechanical Level Switches are the most rugged and durable liquid point-level detection products in the industrial marketplace today. **K-TEK** innovations such as the one-step switch point adjust and the hermetically sealed/dual compartment switching mechanism have eliminated the need for bulky housing covers that are associated with cracking, moisture ingress, high temperature fatigue, and ultimately switch failure. This configuration guide contains general guidelines and ordering data that will assist you in selecting the best float or displacer operated switch for your specific fluid level application. These switches are available in flanged or sealed chambers or as insertion models. K-TEK has over 100 configurations available.

 LS 500 FLANGED TOP MOUNT FLOAT	 LS 510 MNPT TOP MOUNT FLOAT	 LS 550 FLANGED TOP MOUNT DISPLACER	 LS 560 MNPT TOP MOUNT DISPLACER
 LS 600 FLANGED CHAMBER FLOAT	 LS 700 SEALED CHAMBER FLOAT	 LS 800 FLANGED CHAMBER DISPLACER	 LS 900 SEALED CHAMBER DISPLACER

FEATURES

- Rugged and Robust Chamber Design for Demanding Applications
- One Step Switch Point Adjust
- Precision Fabricated Floats and Displacers
- Compact Switching Mechanism Eliminates Bulky Housing and Traditional Bias Springs
- Easily Retrofitted to Most Competitor Models
- Eight (8) Standard Designs and Six (6) Compact Switching Mechanisms

General

- Over 10,000 global installations in applications ranging from condensate to CO2 to crude oil
- Easily retrofitted to most competitor models
- Designed to handle specific gravities as low as 0.25, temperatures as high as 1000° F (538° C), and pressures up to 4500 psi (310 bar)
- Choose from eight (8) standard designs and six (6) different switching mechanisms
- Worldwide delivery
- Five year manufacturer warranty

Chambers

- Choices for chamber material include: Carbon Steel, 316 Stainless Steel, Duplex Stainless Steel, Hastelloy C-276, Hastelloy B-3, and P11 and P91 Chrome Molly Steel.
- Flanged models have standard slip-on “top access connection” flanges. Weld-neck flanges are optional.
- Designed to guidelines of ASME B31.1 and B31.3
- All welders and fabrication procedures are qualified and maintained per ASME
- Certification to NACE MRO175 and MRO103 is available

Sensing Elements

- Each float and displacer is precision fabricated to indicate true fluid level.
- Choices for float and displacer materials include: 316 Stainless Steel, Hastelloy C-276, and Titanium (Grades 2 and 5). Ceramic is also available for displacers.

Process Connections

- A wide variety of process connection types include: Flanges (slip-on, weld-neck), Socket Weld, and Threaded (NPT)
- Available flange ratings and sizes include: ASME, DIN, HG, and most International and customer specified flange types

Switching Mechanisms

- All stainless steel housing construction with NEMA 4X ratings
- Temperature ratings available from -320°F (-190°C) to 1000°F (538°C)
- Choices for switching mechanism types include: Reed, Cam Action, and Pneumatic
- Available switching mechanisms are hermetically sealed, standard open contacts, or pneumatic contacts
- Agency Listings for most switches include: FM, CSA, and ATEX

Options

- Custom Calibration and Switch Point
- High Temperature and Cryogenic Insulation
- Steam Tube and Electrical Heat Tracing
- Vent, Drain, and Process Isolation Valves
- Stilling Wells and Support Tubes for Turbulent Conditions

Quality Certifications

- K-TEK is the only level gauge manufacturer in North America to hold the following certifications: ASME (U, S, and UM Stamps), PED, and National Boiler Certification

OIL AND GAS

- Separator levels

PETROCHEMICAL

- Catalytic Cracker
- Distillation
- Fractionation
- Hydrotreater/Reformer
- Coker
- Flare Knockout Tank

A P P L I C A T I O N S

POWER

- Fuel Storage
- Steam Turbine Drip Legs
- Hotwell Condenser
- Feed Water Heaters
- Demineralization Tanks
- Ash Precipitator/Scrubber
- Steam Drum Level
- Lube Oil Systems

CHEMICAL & OTHER

- Storage & Batch Tank Level
- High Level Alarm Safety Shutdown
- Water/Wastewater Treatment Tanks
- Pulp Processing Tanks
- Lube Oil Tanks
- Sump Control

LS Series Description and Operation Basics

The LS Series is a single or multi point, fluid-level switch. The device consists of a float (or displacer) with an attached magnet and a switch post to house the moving magnet and to support the switch mechanism. The switch post is mounted on either a top entry process connection or to the top of a mechanical cage or chamber. Process connections are typically flanges, NPT, or socket weld connections. Chambers have connections on the side and/or bottom to attach to the side of a tank. Movement of the float (or displacer) is typically limited to the range required to activate the switch mechanism at a specified level.

The LS Series can be a float or displacer operated, magnetically coupled level switch. As the fluid level in the vessel rises or falls, the position of the float or displacer changes with it. Magnets inside the switch post, attached to the float or displacer, move with the changing level as well. A switch mechanism, attached to the exterior of the switch post, detects movement of the magnet past its location, and transfers the contact positions. Use of the LS Series instead of the conventional "bulky housing" cage switch allows easy access to the switch mechanism and there are no seals or diaphragms to wear out. Installation of isolation valves on the inlet and outlet of the chamber allows removal of the entire unit without draining the vessel.

Switching Mechanism Comparison

The K-TEK standard switching mechanism is a magnetically actuated double pole double throw (DPDT) switch. K-TEK offers a variety of magnetically actuated switch mechanisms (reed, cam-action and pneumatic style) with SPDT, DPDT, or pneumatic outputs. When a K-TEK switch mechanism (single or multiple) is mounted on a LS Series mechanical switch, it can sense a high or low level within a vessel. The unique magnetic coupling action eliminates the need for seals, diaphragm springs, or torque tubes because there is no physical contact with the process. The switch configuration also has no process connections which ensures complete isolation from the process. The 360° adjustable switch mechanism does not require the removal of the conventional bulky cover and can be easily positioned at the desired switch point. The compact, maintenance free design, requires no periodic cleaning or operational checks and contains hermetically sealed contacts that ensure high reliability and extended product life.

K-TEK Standard with MS41 Switching Mechanism

Competitor Standard

K-TEK uses high quality design, ASTM materials and ASME construction to provide a significantly higher standard product than our competition. With K-TEK products, a customer never needs to worry if they are getting a good design—all standard products meet the following criteria as a minimum.

K-TEK Standard Chamber

Other Manufacturer's Chamber

K-TEK is the **only** North American level instrument company holding ASME, PED and National Boiler certifications. Any LS Series can be manufactured to following certifications and/or most customer specific supplied standards

U # 26,831 Manufacturer of Pressure Vessels
 UM #26,832 Manufacturer of Miniature of Pressure Vessels
 S #26,830 Manufacturer and Assembly of Power Boilers
 B31.1 Power Piping
 B31.3 Process Piping

Pressure Equipment Directive (97/23/EC)
 #DGR-0036-QS-166-02

Authorized to apply the 'NB' mark and register boilers, pressure vessels, or other pressure retaining items with the National Board in accordance with its provisions. Scope of Authorization is in reference to ASME Stamps S and U.

Float Operated Level Switches Model Series 500, 510, 600, 700

The float rides on the process fluid and tracks with the liquid level movement. As the fluid level in the vessel (or external cage) rises or falls, the position of the float changes. Magnets attached to a float guide rod (located inside the sensing tube) also move with the changing level. A switch mechanism (electrical or pneumatic) attached to the exterior of the sensing tube is actuated by a rising level and de-actuated by a falling level.

Floats can utilize multiple switching mechanisms. Consult the factory for special float switching arrangements.

Displacer Operated Level Switches Model Series 550, 560, 800, 900

Displacer switches offer an alternative means of fluid level measurement different from the traditional float device. While a float follows the liquid level, a displacer remains partially or completely submerged. The buoyancy of the displacer is increased as it becomes covered by more liquid. Therefore, when the displacer weight drops below the spring tension (rising level), the switch mechanism is actuated. Hence, when the displacer weight increases to that greater than the spring tension (falling level), the switch mechanism is de-actuated.

Displacer switches can be utilized in some high pressure and low specific gravity applications where float designs are cost prohibitive or impossible to implement.

Model Number Format

How to Order:

- Step 1:** **/a/ Select Process Connection Configuration**
 Choose a mechanical level switch model series based on maximum working pressure, maximum temperature and minimum specific gravity.
- Step 2:** **/b/ Select Access Connection or Chamber Material**
- Step 3:** **/c/ Select Process Connection Size, Type & Rating**
- Step 4:** **/d/ Select Switching Mechanism Type**
- Step 5:** **/e/ Select Insulation**
- Step 6:** **/f/ Select Options**

Series LS 500/510

Model Number Selection: Step 1

Top Mount Float Series

Model Number Formats

Series LS 5xx - Top Mounted Float					
50x - Flanged Process Connection		Example Application Data: Pressure 26bar, Temperature 225°C, S.G. .68, 4" Flanged Process Connection, 32 3/8" Pneumatic Switch Point Location			
Example: LS502/CST/SR43/F/IP/SP=32 3/8in.					
Model (Series) (a)	Access Connection Material (b)	Access Connection Size, Type & Rating (c)	Switching Mechanism Type (d)	Insulation (e)	Options (f)
502	CST	SR43	F	IP	SP=32 3/8"

Step 1:

/a/ Select **PROCESS CONNECTION CONFIGURATION**

50x Flanged

51x NPT

Note: For both the 50x and 51x, use the table below to select model series.

Top Mount Float Series

Model Series	Pressure at Indicated Temperature				Float Mat'l Code	Minimum S.G.
	100° F (psig)	37.7° C (bar)	450° F (psig)	232° C (bar)		
5x1	225	15.5	207	14.3	T2	.4
5x2	500	34.5	460	31.7	S6	.68
5x3	750	51.7	690	47.6	S6	.52

Float Materials: 316 SS (S6) is the standard. The following materials and others are available. Hastelloy C276; Titanium Gr2 and Titanium Gr5. Construction materials are determined by application specifics (i.e. temperature, pressure and specific gravity).

Consult K-TEK factory for other materials and process conditions not listed.

Series LS 550/560

Model Number Selection: Step 1

Top Mount Displacer Series

Model Number Formats

Series LS 5xx - Top Mounted Displacer					
56x - Threaded Process Connection			Example Application Data: Pressure: 17 bar, Temperature: 35°C, S.G.: 0.76, 1.5" NPT Process Connection, Switch Point Location 20 3/4"		
Example: LS562/SS6/P15/E/X/SP=20 3/4in.					
Model (Series) (a)	Access Connection Material (b)	Access Connection Size, Type & Rating (c)	Switching Mechanism Type (d)	Insulation (e)	Options (f)
562	SS6	P15	E	X	SP=20 3/4"

Step 1:

/a/ Select **PROCESS CONNECTION CONFIGURATION**

55x Flanged

56x NPT

Note: For both the 55x and 56x, use the table below to select model series.

Top Mount Displacer Series

Model Series	Pressure at Indicated Temperature				Displacer Mat'l	Minimum S.G.
	100° F (psig)	37.7° C (bar)	450° F (psig)	232° C (bar)		
5x1	1000	68.9	750	51.7	S6	.6
5x2	275	19.0	182	12.5	S6	.6

Displacer Materials: 316 SS (S6) is the standard. The following materials and others are available. Hastelloy C276; Titanium Gr2, Titanium Gr5 and Porcelain. Construction materials are determined by application specifics (i.e. temperature, pressure and specific gravity).

Consult K-TEK factory for other materials and process conditions not listed.

NOTE: REFERENCE MODEL NUMBER SELECTION NOTES ON THE FOLLOWING PAGE

NOTES:

1. See Flange Pressure Rating Table in Appendix. Information in these tables is taken from ASME Standards. DIN, HG, or other International Flange Types require factory consultation.
2. See Switching Mechanisms and Housings on page 38-39. See Switch Mechanism Product Data Sheets for specifications.
3. See Insulation Descriptions on page 40; Insulation Flange (IF) is recommended for personnel safety.
4. Multiple Options: Separate multiple options with semi-colon (;) Example: ...x/B = 2-11/16 in; SW =17".....
5. CX - Custom Calibration: C + "B" or "C" for required dimension (not "B" and "C") and engineering units (mm, in, cm) Example: x / CB=2-11/16 in; See "Calibration Dimensions."
6. Customer to specify switch point location to nearest 1/8" or specify CX
7. Only applicable if retrofitting Top Insertion Model into existing Chamber. See Figure 1 below. Customer to specify existing Chamber Length (P) and Chamber ID.
8. See Stilling Well (SW) and Support Tubes (ST) descriptions below in Figure 2 and on page 42.
9. Interface Level Measurement (IM) requires special consideration. Consult factory for details.
10. For options and selections not listed, write requirements after model number. Contact the K-TEK factory for price and availability.

SELECTION NOTES ON THE
FOLLOWING PAGE

NOTES:

1. See Flange Pressure Rating Table in Appendix. Information in these tables is taken from ASME Standards. DIN, HG, or other International Flange Types require factory consultation.
2. See Switching Mechanisms and Housings on page 38-39. See Switch Mechanism Product Data Sheets for specifications.
3. See Insulation Descriptions on page 40; Insulation Jackets (IH) & Insulation Flange Covers are recommended for personnel safety.
4. Multiple Options: Separate multiple options with semi-colon (;) Example: ...x/B = 2-11/16 in; H = 287mm;
5. CX - Custom Calibration: C + "B" or "C" for required dimension (not "B" and "C") and engineering units (mm, in, cm) Example: x / CB=2-11/16 in; See "Calibration Dimensions."
6. LX - Custom Length: L + "D" or "H" for required dimension (not "D" and "H") and engineering units (mm, in, cm) Example: x / LH = 287mm; See "Dimension Tables."
7. See Valve Description on Page 41. Vent Valve (VV), Drain Valve (DV), Isolation Valves (IV) Customer to specify valve type and size.
8. Interface Level Measurement (IM) requires special consideration. Consult factory for details.
9. For Available Process Connections, see Tables 3 and 4 (p46-49) in Appendix.
10. Chamber Access Flange Types will be the same as Process Connections. If Process Connections are not flanges, Raised Face Slip-ons will be the standard (unless otherwise specified).
11. Specify power supply 1) 110, 2) 220, 3) 277 OR 4) 440 VAC) (ex. ET21= ET2 with 110VAC power supply). For ET1xx series only, specify setpoint A) 35°, B) 45°, C) 60°, D) 90° or E) 185°F (1.7°, 7.2°, 15.6°, 32.2°, or 85°C) (ex. ET11A = ET1 with 110VAC power supply and a setpoint of 35°F)
12. For options and selections not listed, write requirements after model number. Contact the K-TEK factory for price and availability.

Calibration Dimensions for LS 600 series

1. "B" is the distance that the switch trips on rising level at the specified S.G.
2. "C" is the distance that the switch resets on falling level at the specified S.G.
3. The "B" dimension is the default switch calibration setting.
4. The "C" dimension will vary depending on the particular switch unit specified.
5. If a different "B" or the "C" dimension is required, it should be stated as shown under Options.
6. Calibration accuracy is +/- 1/4" (6mm)

600 Series 6x1		
S.G.	"B"	"C"

NOTE: REFERENCE MODEL NUMBER
 SELECTION NOTES ON THE
 FOLLOWING PAGE

NOTES:

1. See Flange Pressure Rating Table in Appendix. Information in these tables is taken from ASME Standards. DIN, HG, or other International Flange Types require factory consultation.
2. See Switching Mechanisms and Housings on page 38-39. See Switch Mechanism Product Data Sheets for specifications.
3. See Insulation Descriptions on page 40; Insulation Jackets (IH) & Insulation Flange Covers (IF) are recommended for personnel safety.
4. Multiple Options: Separate multiple options with semi-colon (;) Example: ...x/B = 2-11/16 in; H = 287mm;
5. CX - Custom Calibration: C + "B" or "C" for required dimension (not "B" and "C") and engineering units (mm, in, cm) Example: x / CB=2-11/16 in; See "Calibration Dimensions."
6. LX - Custom Length: L + "D" or "H" for required dimension (not "D" and "H") and engineering units (mm, in, cm) Example: x / LH = 287mm; See "Dimension Tables."
7. See Valve Description on Page 41. Vent Valve (VV), Drain Valve (DV), Isolation Valves (IV) Customer to specify valve type and size.
8. Interface Level Measurement (IM) requires special consideration. Consult factory for details.
9. For Available Process Connections, see Tables 3 and 4 (p46-49) in Appendix.
10. Specify power supply 1) 110, 2) 220, 3) 277 & 4) 440 VAC) (ex. ET21= ET2 with 110VAC power supply). For ET1xx series only, specify setpoint A) 35°, B) 45°, C) 60°, D) 90° or E) 185°F (1.7°, 7.2°, 15.6°, 32.2°, or 85°C) (ex. ET11A = ET1 with 110VAC power supply and a setpoint of 35°F)
11. For options and selections not listed, write requirements after model number. Contact the K-TEK factory for price and availability.

Calibration Dimensions for LS 700 series

1. "B" is the distance that the switch trips on rising level at the specified S.G.
2. "C" is the distance that the switch resets on falling level at the specified S.G.
3. The "B" dimension is the default switch calibration setting.
4. The "C" dimension will vary depending on the particular switch unit specified.
5. If a different "B" or the "C" dimension is required, it should be stated as shown under Options.
6. Calibration accuracy is +/- 1/4" (6mm)

 SELECTION NOTES ON THE
 FOLLOWING PAGE

NOTES:

1. See Flange Pressure Rating Table in Appendix. Information in these tables is taken from ASME Standards. DIN, HG, or other International Flange Types require factory consultation.
2. See Switching Mechanisms and Housings on page 38-39. See Switch Mechanism Product Data Sheets for specifications.
3. See Insulation Descriptions on page 40; Insulation Jackets (IH) & Insulation Flange Covers are recommended for personnel safety.
4. Multiple Options: Separate multiple options with semi-colon (;) Example: ...x/B = 2-11/16 in; H = 287mm;
5. CX - Custom Calibration: C + "B" or "C" for required dimension (not "B" and "C") and engineering units (mm, in, cm) Example: x / CB=2-11/16 in; See "Calibration Dimensions."
6. LX - Custom Length: L + "D" or "H" for required dimension (not "D" and "H") and engineering units (mm, in, cm) Example: x / LH = 287mm; See "Dimension Tables."
7. See Valve Description on Page 41. Vent Valve (VV), Drain Valve (DV), Isolation Valves (IV) Customer to specify valve type and size.
8. Interface Level Measurement (IM) requires special consideration. Consult factory for details.
9. For Available Process Connections, see Tables 3 and 4 (p46-49) in Appendix.
10. Chamber Access Flange Types will be the same as Process Connections. If Process Connections are not flanges, Raised Face Slip-Ons will be the standard (unless otherwise specified).
11. Specify power supply 1) 110, 2) 220, 3) 277 or 4) 440 VAC (ex. ET21= ET2 with 110VAC power supply). For ET1xx series only, specify setpoint A) 35°, B) 45°, C) 60°, D) 90° or E) 185°F (1.7°, 7.2°, 15.6°, 32.2°, or 85°C) (ex. ET11A = ET1 with 110VAC power supply and a setpoint of 35°F)
12. For options and selections not listed, write requirements after model number. Contact the K-TEK factory for price and availability.

Calibration Dimensions for LS 800 series

1. "B" is the distance that the switch trips on rising level at the specified S.G.
2. "C" is the distance that the switch resets on falling level at the specified S.G.
3. The "B" dimension is the default switch calibration setting.
4. The "C" dimension will vary depending on the particular switch unit specified.
5. If a different "B" or the "C" dimension is required, it should be stated as shown under Options.
6. Calibration accuracy is +/- 1/4" (6mm)

The switch point of LS Series level switches is dependent upon the specific gravity of the process fluid and other factors. As specific gravity decreases, the distance between the centerline of the upper process connection and the fluid level at which the switch transfers decreases. This is due to the additional amount of fluid required to make the float buoyant at the lower specific gravity. This means that actual fluid levels at the switch transfer point vary with specific gravity.

The function of the LS Series level switch depends upon the movement of a magnet assembly within the switch post to activate an external switch. In order to begin moving up with rising fluid level, a small amount of static friction must be overcome. To facilitate this additional force, the floats are designed with reserve buoyancy to provide force for movement and to provide buoyancy with decreases in specific gravity. This reserve buoyancy is in the form of the amount of float that is above the fluid level. In order for the reserve buoyancy to be useful, it must be located where fluid may actually reach it. As a standard, we design the floats so that the top is even with the centerline of the upper process connection when the magnet assembly is all the way to the top of the sensor tube. This allows standardization of all chambers for manufacturing. The fluid level at switching is then a function of the specific gravity and the float selected.

Dead-band of a magnetically operated switch is the distance a magnet must travel to transfer from one state to another. Switch transfer dead-band is a function of the type of switch selected and the strength of the magnetic field. The reed switch variety have only a small dead-band, while the cam actuated switches have larger dead-bands. Because the dead-band is different for each switch type, we set LS Series switches to either the High (rising fluid (standard)) or the Low (falling fluid) reference point on the LS Series sensor tube per the customer's requirements. The operation of the switch in the opposite direction is the dead-band distance. The location of the on/off points for each type of switch is consistent for that type, and is therefore known and placed on the sensor tube at the reference point on the sensor tube.

The LS Series is constructed such that sufficient over-travel past the switch point occurs to ensure proper operation no matter what switch type is used. This allowed over-travel increases the distance from the centerline of the upper process connection to the fluid level at the high switch point. This value is fixed at 11/16" for existing switch requirements. A difference of 13/16" between the high and low reference points has also been established due to existing switch requirements. Therefore, the high switch point is determined by the 11/16" over-travel plus the length of the float above the fluid level at the specific gravity specified. The low switch point is determined by the 11/16" over-travel plus the 13/16" difference between the reference points and the length of the float above the fluid level at the specific gravity specified.

The following "magnetically activated" switching mechanisms in Table 1 are available and ready for use with the LS Series Switches. This table provides details on specific switching mechanism applicability. All switching mechanisms are available with the European CE mark. Consult the KTEK factory for certification/documentation. In high corrosive applications, K-TEK recommends the use of stainless steel housings over aluminum enclosures. Please see product data sheets on the KTEK website at www.ktekcorp.com for the latest specifications and approvals.

IF
INSULATION FLANGE- **RATED UP TO 900°F (482°C) MAX**

IHx
INSULATION JACKET HIGH TEMPERATURE - **RATED UP TO 900°F (482°C) MAX**

IHxD
INSULATION WRAP INCLUDES JACKET, FLANGE, VALVES AND PROCESS CONNECTIONS **RATED UP TO 900°F (482°C) MAX**

IP
INSULATION PAD -ALL SERVICES $\geq 180^{\circ}\text{F}$ (82°C) PNEUMATIC SWITCHES ONLY
ALL SERVICES $\geq 300^{\circ}\text{F}$ (149°C) ELECTRIC SWITCHES ONLY

ILx
INSULATION - CRYOGENIC SERVICES **RATED DOWN TO -320°F (-196°C) MIN**

NOTE: KTEK recommends for Process Temperatures $\geq 150^{\circ}\text{F}$ (66°C) the use of **IHx**, **IF** Or **IHxD** for personnel safety.

NOTE: Consult K-TEK factory for overall physical dimensions of cryogenic units.

Mechanical Level Switches

Options/Stilling Wells

NOTE: Stilling Well (SW) dimensions are determined by customer application. K-TEK recommends the use of Stilling Wells (SW) or Existing Chambers (CAGES) on all Top Mount Units $\geq 24"$ insertion length. Consult factory on the use of Support Tubes (ST). See illustrations below.

Note: Please see Option Code Table on page 47

Table 3 (Continued)

Description of Option Codes			
C0	FNPT Coupling	SW	Socket Weld Flange ¹
C0E	FNPT Coupling Connected Via Extruded Outlet ²	SWE	Socket Weld Flange Connected Via Extruded Outlet ²
C0L	Thread-o-let (Min SCH 40 Chamber)	T0	Butt Welded Dome Pipe Cap
C1	Socket Weld Coupling	T2	T0 with FNPT Coupling and Plug
C1L	Sock-o-let (Min SCH 40 Chamber)	T3	T0 with Socket Weld Coupling
C2	C0 with plug	T4	T0 with FNPT Coupling
FE	Weld Neck Flange Connected Via Extruded Outlet ²	T5	T0 with Nipple, for Socket Welding (Flat end)
F0	Weld Neck Flange ¹	T6	T0 with Nipple, for Butt Welding (37.5° Beveled end)
F0E	FE with pipe between chamber and Weld Neck Flange	T7	T0 with Nipple, MNPT
		T9	T0 With Nipple and Flange
F1	Weld Neck Flange with Weld-o-let (Min SCH 40 Chamber)	W0	Welded Flat Pipe Cap with Float Stop Spring
F2	Weld Neck Flange with Weld-o-let and Concentric Reducer (Min SCH 40 Chamber)	W1	W0 with FNPT ³ ; 1/2" FNPT standard
F3	Weld Neck Flange with Concentric Reducer	W2	W0 with Plug ⁵ ; 1/2" Standard
F3E	Weld Neck Flange with Concentric Reducer Connected Via Extruded Outlet ²	W3	W0 with Socket Weld Coupling
F4	Weld Neck Flange with Butt Weld Tee	W4	W0 with FNPT Coupling
GE	Slip-On Flange Connected Via Extruded Outlet ²	W5	W0 with Nipple, for Socket Welding (Flat end)
G	Slip-On Flange ¹	W6	W0 with Nipple, for Butt Welding (37.5° Beveled end)
G1	Slip-On Flange with Weld-O Let and Pipe Nipple	W7	W0 with Nipple, MNPT
G4	Slip-On Flange with Butt Weld Tee and Pipe Nipple	W9	W0 with Nipple and Flange ⁶
L	Stub End with Loose (Lap Joint) Flange	W10	W0 with Socket Weld Bore ⁴ ; 1/2" SW Standard
N0E	Branch Nipple for Socket Weld (Flat end) Connected Via Extruded Outlet ²	X	No Connection
N0	Branch Nipple for Socket Weld (Flat end)		
N2	Branch Nipple for Butt Welding (37.5° Beveled end)		
N2E	Branch Nipple for Butt Welding (37.5° Beveled end) Connected Via Extruded Outlet ²		
N3	MNPT Branch Nipple		
N3E	MNPT Branch Nipple Connected Via Extruded Outlet ²		
N6	Weld-o-let (Min SCH 40 Chamber)		
Notes:			
1: Extruded outlet can be utilized as follows			
	<u>FLANGES & NIPPLES</u>		<u>COUPLING SIZES</u>
Stainless Steel:	Sch. 10 chambers with 1", 1-1/2" & 2" connections		3/4", 1", 1-1/4"
	Sch. 40 chambers with 1-1/2" & 2" connections ²		1-1/4"
Alloy20:	Sch. 10 chambers with 1-1/2" & 2" connections		1-1/4"
Hastelloy:	Sch. 10 chambers with 1-1/2" & 2" connections		1-1/4"
2: Cannot extrude SCH 40 seamless pipe			
3: 1/2" FNPT Standard; Optional FN7 (3/4") or FN1 (1"). Specify after option. (i.e.: W1FN7)			
4: 1/2" SW Standard; Optional SW7 (3/4"). Specify after option. (i.e.: W10SW7)			
5: 1/2" plug Standard; see Table 4 (Page 49) for additional sizes.			
6: Select T9 or W9 when chamber configuration is top side/ bottom bottom.

1. Extruded Outlets are full bore up to a maximum of 2". See Note 1 on Page 47.
2. 1/2" to 2 1/2" flanges use 1500# if 900# is specified.
3. Flat face flanges can be supplied with the (SF or WF) designator. (i.e. for a 1/2" 150# flat face flange, please specify SF51 or WF51)

Table 5

<u>Pressure</u>			
To Convert From:	To:	Use this formula:	
Bar	Pounds per Square Inch (psi)	bar	x 14.504 = psi
KiloPascals (kPa)	Pounds per Square Inch (psi)	kPa	x 0.145 = psi
MegaPascals (Mpa)	Pounds per Square Inch (psi)	Mpa	x 145 = psi
Kilograms per cm ² (kg/cm ²)	Pounds per Square Inch (psi)	kg/cm ²	x 14.223 = psi
Pounds per Square Inch (psi)	Bar	psi	÷ 14.504 = bar
Pounds per Square Inch (psi)	Kilo Pascals (kPa)	psi	÷ 0.0145 = kPa
Pounds per Square Inch (psi)	Mega Pascals (Mpa)	psi	÷ 145 = Mpa
Pounds per Square Inch (psi)	Kilograms per cm ² (kg/cm ²)	psi	÷ 14.223 = kg/cm ²
<u>Specific Gravity</u>			
To Convert From:	To:	Use this formula:	
Kilograms per meter ³ (kg/m ³)	Specific Gravity (SG)	kg/m ³	x 0.001 = SG
Pounds per foot ³ (lb/ft ³)	Specific Gravity (SG)	lb/ft ³	÷ 62.4 = SG
Degrees API	Specific Gravity (SG)	141.5	÷ (API + 131.5) = SG
Specific Gravity (SG)	Kilograms per meter ³ (kg/m ³)	SG	x 1000 = kg/m ³
Specific Gravity (SG)	Pounds per foot ³ (lb/ft ³)	SG	x 62.4 = lb/ft ³
Specific Gravity (SG)	Degrees API	(141.5 ÷ SG)	- 131.5 = API
<u>Length</u>			
To Convert From:	To:	Use this formula:	
millimeters (mm)	inches (in)	mm	÷ 25.4 = in
meters (m)	feet (ft)	m	x 3.281 = ft
inches (in)	millimeters (mm)	in	x 25.4 = mm
feet (ft)	meters (m)	ft	÷ 3.281 = m
<u>Temperature</u>			
To Convert From:	To:	Use this formula:	
Degrees Fahrenheit (°F)	Degrees Centigrade (°C)	(°F - 32)	÷ 1.8 = °C
Degrees Centigrade (°C)	Degrees Fahrenheit (°F)	(°C x 1.8)	+ 32 = °F
<u>Fluid Flow Rates</u>			
To Convert From:	To:	Use this formula:	
Feet per Second (FPS)	Gallons per Minute (GPM)	FPS x 448.83	x A1 = GPM
Kilograms per Hour (kg/H)	Gallons per Minute (GPM)	(kg/H ÷ kg/m ³)	x 4.403 = GPM
Meters per Second (m/s)	Gallons per Minute (GPM)	m/s x A2	x 15852 = GPM
Cubic meters per Hour (m ³ /H)	Gallons per Minute (GPM)	m ³ /H	÷ 4.4 = GPM
Gallons per Minuter (GPM)	Feet per Second (FPS)	GPM	÷ (448.83 x A1) = FPS
Gallons per Minuter (GPM)	Kilograms per Hour (kg/H)	GPM x kg/m ³	÷ 4.403 = kg/H
Gallons per Minuter (GPM)	Meters per Second (m/s)	GPM	÷ (A2 x 15852) = m/s
Gallons per Minuter (GPM)	Cubic meters per Hour (m ³ /H)	GPM	÷ 4.4 = m ³ /H
<u>Variables</u>			
A1 = Area of pipe in square feet (ft ²)			
A2 = Area of pipe in square meters (m ²)			
kg/m ³ = Specific gravity in kilograms/cubic meter
